

Dissemination of Erasmus project : "Children in action against Climate Change"

On 25th January , on Zoom platform, partners of the project "Children in action against Climate Change" will present the main aims of Erasmus K 229 project which started in 2020th.

Partners are preschool institutions from Poland, Greece, Turkey, Spain and Serbia.

We will speak about importance of implementing teaching about SDGs and climate change in our preschool program because the best way to reduce global warming and stop climate changes is behavior changing.

We will present samples of good practice and plan of our future activities. As individuals, people often feel hopeless , they think that as individuals they cannot do much for reducing the effects of climate change. But individual behavior change means a lot, when millions of people do small actions and changes of behavior. Especially important is to teach children about climate change and appropriate behavior because they will be creators of our future and they will have to find solutions for solving the large scale of climate change problems.

Participants will have opportunity to see how preschool teachers from different countries engage children in exploring climate change , understanding causes and effects of climate change, taking actions and share information about their work.
